SUMMARY

Full Stack Developer specializing in the **MERN** stack with hands-on experience building and deploying end-to-end web applications featuring secure authentication, role-based access control, booking workflows, and real-time user interactions. Proficient in designing scalable REST APIs, optimizing MongoDB queries, and developing responsive React applications with Redux Toolkit. Passionate about building performant, maintainable software and delivering seamless user experiences across the full development lifecycle.

TECHNICAL SKILLS

- **Languages:** JavaScript, Python, C
- **Frontend:** React, Redux Toolkit, Tailwind CSS, HTML/CSS
- **Backend:** Node.js, Express.js, REST API design, JWT auth & refresh-token flows
- **Databases:** MongoDB, MySQL, PostgreSQL — schema design, indexing, aggregation pipelines
- **Tools:** Git/GitHub, Postman, VS Code

PROJECTS

Car Rental Platform — Full Stack Marketplace

[Live Link](#)

React · Node.js · Express.js · MongoDB · JWT · Tailwind CSS

- Built a two-sided rental marketplace connecting renters and vehicle owners, supporting advanced filtering by brand, fuel type, seating capacity, and availability.
- Implemented JWT-based authentication and role-based authorization to secure renter and owner workflows. Verified authentication and authorization flows using Postman and role-based test scenarios.
- Developed an end-to-end booking workflow with availability validation, booking management, and owner controls while maintaining average API response times below 200 milli seconds.
- Structured MongoDB schemas and indexes to support sub-**120ms** search queries across the full vehicle catalog

Video Tube — YouTube-Style Video Platform

React · Redux Toolkit · Node.js · Express.js · MongoDB · JWT · Cloudinary

- Designed a video-sharing platform handling upload, playback, subscription, comments, like and watch history with lazy loading, pagination, infinite scrolling, secure uploads and protected routes.
- Implemented secure JWT authentication with automatic refresh-token rotation supporting secure 7-day login sessions, eliminating forced re-logins and keeping sessions active for 7 days.
- Centralized application state with Redux Toolkit and client-side caching, reducing unnecessary API requests and improving UI responsiveness.
- Built protected-route middleware and access control covering **8** distinct endpoints, verified with **13** Postman API requests.

EXPERIENCE & ACHIEVEMENTS

AI/ML Intern — ADS Foundation, Gandhinagar

3 months

- Built and evaluated **Brain Tumor Classification** deep learning model using TensorFlow with VGG16 on a **Briain Tumor MRI** dataset with **7200** human brain images, achieving 0.90 precision, 0.89 recall and 0.89 F1 score.
- Applied **image preprocessing, enhancement, data augmentation and transfer learning** to improve model generalization and reduce overfitting during training.
- Deployed the trained model in a Flask application to enable image classification through a web interface.

Green Skills and Artificial Intelligence Program — Skill4Future, Shantilal Shah Engineering College

- Completed applied coursework in sustainable AI practices and green computing principles

EDUCATION

Shantilal Shah Engineering College, Bhavnagar

2022 – 2026

Bachelor of Engineering in Information Technology — 8.05 CGPA
